PROFESSIONAL SUMMARY

Software engineer with four years of experience building web applications. Interested in backend work and data pipelines.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frameworks: React, Node.js, Express, Flask

Databases: PostgreSQL, Redis

Tools: Docker, Git, GitHub Actions, Linux

EXPERIENCE

Software Engineer — Northwind Logistics

Mar 2022 – Present

San Francisco, CA

- Worked on the shipment tracking service used by internal operations teams.
- Built REST APIs in Node.js and Express for the customer portal.
- Helped migrate the reporting database to PostgreSQL, which reduced query times by 35%.
- Wrote unit tests and reviewed teammates' pull requests.
- Set up GitHub Actions pipelines for the team's three main services.

Junior Developer — Brightpath Media

Jul 2020 – Feb 2022

Remote

- Maintained a React frontend for a content publishing tool.
- Fixed bugs reported by the support team.
- Added Docker configuration so developers could run the stack locally.

PROJECTS

Parcel Insights

[github.com/averychen-demo/parcel-insights](#)

- Analysed public shipping datasets with Python and pandas.
- Built a small Flask dashboard to visualise delivery delays.

Technologies: Python, pandas, Flask

EDUCATION

B.S. Computer Science — University of California, Davis

2016 – 2020

- Coursework in algorithms, databases and distributed systems.

CERTIFICATIONS

Docker Certified Associate — Docker Inc.

2023
